International Federation of Nurse Anesthetists

MODEL CURRICULUM

18 - 24 MONTH - CERTIFICATE (NON-DEGREE) NURSE ANESTHESIA PROGRAM

Approved: May, 2014
Revised: May 2016

All rights reserved

© IFNA
Introduction
Certificate Nurse Anesthesia programs can be offered by universities* or other recognized educational institutions. They require a student workload covering at least 18 to 24 months full-time. This IFNA model curriculum is structured as a 24-months course.

The issue of credits
There is a wide variation of credit awarding and point systems worldwide. The European Credit Transfer System (ECTS) which varies even within Europe can be found in the appendix and it serves as an example only. Countries will use their own systems.

Location of the program
The program can reside within an academic department, in a sponsoring department of a university or hospital or some other recognized learning setting.

Curriculum
The curriculum is intended to produce nurse anesthetists who:
- Provide anaesthesia under direct or indirect supervision, independently and in cooperation with physician anaesthetists
- Collaborate with other members of the perioperative team
- Maintain patient safety and transparency to the public
- Maintain quality of care and outcomes
- Participate in adequate continuous education and training

The model curriculum, suggested by IFNA, is a possible way to meet the IFNA graduate competencies as outlined in the Educational Standards for Preparing Nurse Anesthetists. The structure can be altered and adapted to national, socio-cultural and legal circumstances. A record of clinical training (clinical assessments) and workplace experience (number and variation of cases and procedures) has to be provided and the learning process, learning activities, meeting of learning outcomes and competencies should be documented in a professional portfolio*.

Selection Process/Entry Requirement
Minimum prerequisites for applicants to programs are:
- Completion of a basic nursing education program of at least 36 months in length from an institution recognized or accredited by governmental or nongovernmental accreditation or quality assurance entity (if available)
- Nursing experience of at least one (1) year, preferably in an acute care setting
- Ability to speak and write in the language of instruction

Assessment Strategy
Assessment methods
- Formative and summative assessments of all classroom and clinical stages
- Demonstration of solid theoretical knowledge (written, oral)
- Ability to perform and assist in performing anesthetic procedures in a safe and correct fashion (clinical assessments)
- Proof of an adequate number and variety of cases
- All components of the assessment have to be passed to progress

Graduate Competencies
The IFNA graduate competencies, except the research competencies (thesis), (see IFNA graduate competencies in the *Educational Standards for Preparing Nurse Anesthetists*) should be met at the end of the course

Course structure
The course should last at least 18 - 24 months and consist of:
- Full time enrollment
- Extensive clinical experience
- Comprehensive exam (see assessment strategy)
- Prescribed program of courses, seminars, projects or other structured activities that help students meet the learning outcomes
- Assigned faculty adviser or advisory committee for each student
- Availability of resources and facilities
- Plan to evaluate and improve the program

(*) see glossary
Conceptual framework
To define the graduate competencies, required for safe practice, IFNA has adopted and adapted the well-known CanMEDS competency framework. The framework was initially developed by the Royal College of Physicians and Surgeons of Canada in 1996 to describe the core knowledge, skills and abilities of specialist physicians. Meanwhile CanMEDS has been widely adopted worldwide within medicine in general and within other healthcare professions such as nursing. CanMEDS identifies and describes seven different roles that together lead to optimal health care outcomes (see diagram above).

01 CanMEDS roles, ethical and legal issues of nurse anesthesia

This course provides an analysis of nurse anesthesia history, professional associations and councils, legal aspects governing nurse anesthesia practice, hospital and governmental regulatory agencies, nurse anesthesia scope of practice, informed consent, cultural competency, and ethical and professional considerations relating to the nurse anesthesia profession.

Major Topics
History of nurse anesthesia, legislation of nurse anesthesia, scope of practice (standards) CanMEDS role model, professional regulation, ethics in nurse anesthesia, cultural issues, informed consent, issues of professional associations

Course objectives
At the end of the course students will be able to:
1. Describe the historical development of nurse anesthesia practice.
2. Analyze major legal and ethical issues related to the specialty
3. Describe the significance of scope of practice issues in nurse anesthesia
4. Describe the CanMEDS role model and its implication for practice
5. Analyze collaboration, communication under the aspect of patient safety

02 Basic Principles of Anesthesia
CanMEDS: expert, communicator, health advocate, collaborator, professional

Basic principles of preoperative patient assessment, anesthesia planning, operating room preparation, interpretation of pertinent patient findings, and required documentation for safe anesthesia management.

Major topics
Non-invasive monitoring, airway anatomy, assessment, management, preoperative assessment, fluid and blood component therapy, positioning, anesthesia machine functions, documentation, universal precautions and infection control, collaboration, communication, anxiety control, health education

Course objectives
At the completion of this course the student will be able to:
1. Outline the components, describe the operation, perform equipment checks and demonstrate procedures for safe use of the anesthesia machine and adjunctive equipment.
2. Synthesize information obtained in a comprehensive preoperative evaluation and formulate a basic anesthesia plan of care, including positioning, fluid administration, basic monitoring, and airway management.
3. Communicate perioperative assessment findings, derived from the synthesis of data, in appropriately documented form.
4. Describe crisis intervention methods, characteristics of teamwork and collaboration

03 Basic Science
CanMEDS: expert, professional
Applied sciences course that introduces the basic principles of chemistry, physics and neuroscience and the integration of these principles into the practice of nurse anesthesia.

Major Topics:
Pressure, tension, flow, solubility, gas laws, diffusion, osmosis, vaporization, electricity, chemistry, anesthetic agents, neuroanatomy, neurophysiology, mechanisms of general anesthesia and physiology of pain

Course Objectives
Upon completion of this course the student will be able to:
1. Synthesize physical principles and their relationship to the practice of anesthesia
2. Differentiate neurologic anatomy and physiology and describe the effects of anesthetic medications on neurological systems.
3. Analyze and integrate select principles of organic and inorganic chemistry to the practice of anesthesia.

04 Anesthesia Pharmacology I
CanMEDS: expert
Drug mechanisms, pharmacological effects, drug-receptor site interactions, structure activity relationships, therapeutic uses and adverse effects of agents used in the perioperative period.

Major Topics
Pharmacokinetics/pharmacodynamics of induction drugs, inhalational anesthetics, benzodiazepines, anxiolytics, intravenous analgesic agents, local anesthetics, neuromuscular blocking agents and reversals

Course objectives:
Upon completion of the course the student will be able to:
1. Analyze the appropriateness of specific general and local anesthetic agent, considering patient-specific body habitus, age, physiology, concurrent medications, pathophysiology, and the surgical procedure.
2. Discuss the uses, limitations and contraindications of depolarizing and non-depolarizing neuromuscular blockers, local anesthetics, cardiovascular - and asthma - medications recognizing differences in onset, duration of action, clearance, and side effects.
3. Synthesize appropriate and safe anesthesia management protocols utilizing the anesthetic agents discussed.
Clinical Practicum I

2. Semester

05 Physiology I
CanMEDS: expert

Major Topics
Cardiovascular, respiratory, renal, neurological, hematological, and cellular physiology, with particular emphasis on how these systems relate to anesthesia management.

Course objectives
At the completion of this course the student will be able to:
1. Describe the important anatomical structures for each of the body systems presented.
2. Discuss the major functions and processes of each of the major body systems.
3. Synthesize the complex regulatory processes that produce homeostasis for each of the body systems discussed.
4. Analyze the effects of anesthesia on select physiologic systems.

06 Pathophysiology I
CanMEDS: expert
Pathophysiologic disorders with emphasis on the surgical patient and implications for safe anesthesia management.

Major topics
Endocrine disorders, neurological diseases, respiratory diseases

Course objectives
At the completion of this course the student will be able to:
1. Analyze the pathophysiologic basis, manifestations, and treatment options for the disorders discussed.
2. Integrate information regarding the presented pathophysiology with perioperative and anesthesia management.

07 Advanced Principles of Anesthesia I
CanMEDS: all roles
Anesthetic principles associated with specific specialty procedures; management of identified patient groups and patients with special problems.

Major topics
Gynecologic procedures, obstetrics, orthopedic procedures, general surgery, ENT-procedures, pediatric patients and geriatric patients

Course objectives
At the end of the course students will be able to:
1. Synthesize appropriate and safe anesthetic management plans based on the patient’s age, pathophysiology, and surgical procedure.
2. Differentiate anatomical and physiological features, equipment issues, and pharmacological considerations unique to pediatric patients.
3. Differentiate anatomical and physiological features and pharmacological considerations associated with geriatric patients.
4. Demonstrate features of collaboration, workplace – and team organisation as well as ethical and professional aspects

08 Advanced Anesthesia Pharmacology II
CanMEDS: expert
Pharmacological effects, drug-receptor site interactions, therapeutic uses and adverse effects of agents used in the perioperative period.

Major Topics
Antacids, histamine antagonists, gastrointestinal prokinetics, anticoagulants, anti-platelet agents, thrombolytics, local anesthetics, autonomic pharmacology cardiovascular pharmacology, antiemetics and NSAIDS

Course objective
At the completion of this course the student will be able to:
1. Explain the major principles of pharmacokinetics and pharmacodynamics as they relate to inhalational and intravenously administered drugs.
2. Analyze the mechanism of action and the pharmacologic effects of specific anesthetic agents
3. Analyze the mechanism of action and the pharmacologic effects of adjunctive agents used in the perioperative period such as anticoagulants, gastroprokinetic agents, diuretics, and antiemetics.

09 Research theory
CanMEDS: scholar
Research for utilization in practice.

Course objectives
At the end of the course students are able to:
- Describe the way research, education and practice relate to each other
- Identify the importance of critical thinking
- Identify the steps of critical reading
Clinical Practicum II

Second Year

3. Semester

10 Advanced Principles of Anesthesia II
CanMEDS: expert
Anesthetic principles associated with specific specialty procedures; management of identified patient groups and patients with special problems.

Major topics
Cardiovascular procedures, thoracic procedures, plastic surgery, ophthalmic procedures, neurological procedures, fiberoptic intubation, CVP insertion, trauma, genitourinary procedures

Course objectives
At the end of this course students will be able to:
1. Synthesize appropriate and safe anesthetic management plans based on the patient's age, pathophysiology, and surgical procedure.
2. Differentiate anatomical and physiological features, equipment issues, and pharmacological considerations unique to pediatric patients.
3. Differentiate anatomical and physiological features and pharmacological considerations associated with geriatric patients.

11 Pathophysiology II
CanMEDS: expert
Pathophysiologic disorders with emphasis on the surgical patient and implications for safe anesthesia management.

Major topics
Pediatric disorders, hematological diseases, cardiovascular disorders, renal disease, neuromuscular and musculoskeletal disorders, pain, psychiatric disorders, liver disease

Course objectives
At the completion of this course the student will be able to:
1. Analyze the pathophysiologic basis, manifestations, and treatment options for the disorders discussed.
2. Integrate information regarding the presented pathophysiology with perioperative and anesthesia management.

12 Pharmaco-therapeutics
CanMEDS: expert
Pharmacological basis of drug management as it relates to the use of drugs, both prescriptive and non-prescriptive for patients throughout the life span. Includes pharmacodynamics and pharmacokinetics of drug groups, dosage calculations, drug interactions and patient education.
Major Topics
Basics of pharmacotherapy & dosage calculations, receptors, peripheral & autonomic nervous system drugs, central nervous system drugs & psychiatric drugs, gastrointestinal, hematologic & dyslipidemia drugs, smooth muscle & pulmonary drugs, cardiovascular & renal system drugs, endocrine system drugs, antibiotics & analgesics, pain management, drugs of abuse, arthritis and gout

Course objectives
At the completion of this course, the student will be able to:
1. Understand the pharmacokinetics and pharmacodynamics of broad categories of drugs.
2. Describe the pharmaco - therapeutics of broad categories of drugs including prescription drugs, complementary therapies, and non – prescription medications.
3. Understand the relationship among pharmacologic agents, pathophysiology and physiologic response.
4. Describe adverse reactions, monitoring parameters, and drug interaction considerations for broad categories of drugs.

13 Advanced Principles of Anesthesia III
CanMEDS: all roles
Anesthetic principles associated with specific specialty procedures and management of identified patient groups and patients with special problems.

Major topics
Day surgery and off-site anesthesia, regional anesthesia, obstetrical anesthesia, obesity/bariatric procedures, burns and critical care

Course objectives:
At the end of the course students will be able to:
1. Synthesize appropriate and safe anesthetic management plans based on the patient’s age, pathophysiology, and surgical procedure.
2. Differentiate surgical and equipment issues, monitoring, and pharmacological considerations unique to the procedures presented.
3. Differentiate anatomical and physiological features and positioning considerations associated with procedures presented.
4. Identify issues of collaboration, communication and teamwork, as well as ethical and professional considerations
Clinical Practicum III

4. Semester

14 Economics and Organization
CanMEDS: manager

Students are presented content in order to advance their knowledge of the evolution, organization, development of health policy, and the economics and financing of the health care system.

Course objectives:
At the end of the course students will be able to:
1. Analyze the organization, interrelationships among components, and function of the health care system.
2. Analyze contemporary health care issues related to cost control, distribution of services, health policy development, and access to care

15 Nurse Anesthesia Review
CanMEDS: all roles

Review of the chemistry & physics, pathophysiology, pharmacology, physiology, and management principles associated with anesthesia care.

Activities:
Each student will develop, organize and present an analysis of assigned topics on anesthesia management.

The final Satisfactory (S) / Unsatisfactory (U) grade will be based on successful completion (minimum 65% score) on a multiple choice comprehensive examination. Satisfactory = 65% - 100% Unsatisfactory = less than 65%

Course objectives
Students will:
1. Contribute to class review of anesthesia management principles.
2. Demonstrate integration of anesthesia management concepts in all areas practice

Clinical Practicum IV

Clinical Practice

Clinical practicum is in simulation labs, hospital and/or day surgical sites with graduated instruction in the clinical management of patients receiving various types of anesthesia. Each practicum builds on previously developed skills progressing from basic operating room orientation to the administration and assisting in administration of anesthesia for patients with complicated pathophysiology. The focus is on preparation, planning, and implementation of a safe anesthesia, and application of prior classroom learning. Specialty areas and regional anesthesia are incorporated. Teamwork, communication, collaboration,
and educational issues are stressed as well as organizational aspects in order to meet the IFNA standards, described within the CanMEDS framework.

Evaluation
Effective evaluation tools should reflect the increased complexity of cases as students progress through the program. The clinical instructors complete an evaluation after each clinical period (formative evaluation) and the total grade is calculated and conferred by the course instructor from the semester total evaluations (summative evaluation). The clinical practicum can be graded as Satisfactory (S) or Unsatisfactory (U).

Duration:
Clinical practicum should be as close to 50% of the total education

Course objectives:
1. Vigilance in the delivery of patient care
2. Protection of patients from iatrogenic complications
3. Participation in the positioning of patients to prevent injuries
4. Conduction of a comprehensive and appropriate equipment check
5. Utilization of standard precautions and appropriate infection control measures
6. Provision of care throughout the perianesthetic continuum
7. Utilization of a variety of current anesthesia techniques, agents, adjunctive drugs, and equipment while providing anesthesia
8. Administration or assisting in administration of general anesthesia to patients of all ages and physical conditions for a variety of surgical and medically related procedures
9. Provision or assistance in of anesthesia services to all patients, including trauma and emergency cases
10. Administration or assistance at administration and management of a variety of regional anesthetics
11. Function as a resource person for airway and ventilation management
12. Delivery of culturally competent perianesthetic care
13. Application of theory to practice, decision-making and problem solving
14. Provision of nurse anesthesia care based on sound principles and research evidence
15. Performance of preanesthetic assessments and formulation of an anesthesia care plan
16. Identification and application of appropriate action when confronted with anesthetic equipment-related malfunctions
17. Interpretation and utilization of data obtained from noninvasive and invasive monitoring data
18. Calculation, initiation, and management of fluid and blood component therapy
19. Recognition and appropriate response to anesthetic complications that occur during the perianesthetic period
20. Effective communication and collaboration with all individuals contributing to perioperative patient care
21. Utilization of appropriate verbal, nonverbal, and written communication in the delivery of perianesthetic care
22. Participation in activities that improve anesthesia care
23. Function within appropriate legal requirements, accepting responsibility and accountability for practice
24. Self-evaluation, self-learning
25. Participation in continuing education activities to acquire new knowledge and improve practice
26. Understanding sound principles of anesthesia risk management to include preventive and procedural strategies
Glossary

**Portfolio.** Collection of evidence proving that an individual has attained specific learning outcomes and competencies, which may be useful for current or potential employers.

**University.** Any type of higher education institution which, in accordance with national legislation or practice, offers recognized degrees or other recognized tertiary level qualifications, or vocational education or training at tertiary level.
Appendix I

https://en.wikipedia.org/wiki/European_Credit_Transfer_and_Accumulation_System

The ECTS, European Credit Transfer System, is a credit system first introduced in Europe in 1989 within the educational exchange program Erasmus. However, the ECTS is now widely used throughout higher education institutions as it facilitates student mobility within Europe and the comparison of study programs and courses.

How does the ECTS benefit students?

The ECTS is a learner-centered system based on the student workload required to achieve a certain course outcomes. The workload refers to the amount of time a student needs to complete the learning activities, such as self-study, seminars, projects or exams, to achieve the course outcomes.

The credits can be attached to study programs, courses or even modules within a course. Furthermore, students can accumulate credits and pass them over to other institutions to continue with their studies. Therefore, the ECTS is also referred to as European Credit Transfer and Accumulation System.

The use of the ECTS by institutions is not compulsory. However, if you plan to study in Europe, you will notice the majority of institutions provide students with the number of ECTS each course and module is worth.

How many ECTS is an academic year worth?

A full-time student would need to complete 60 ECTS per academic year, which represents about 1,500 to 1,800 hours of study. According to the ECTS, study programs in Europe are worth the following number of credits:

- Bachelor's degrees (first cycle) are worth 180 - 240 ECTS (3 to 4 years)
- Master's programs (second cycle) are worth 60 - 120 ECTS (1 to 2 years)
- PhD studies (third cycle) have no ECTS range

You may read further information about the ECTS on the European Commission website about the ECTS System or by downloading the ECTS User's Guide.

### American Credit System

They are ‘credit hours’ versus ‘contact hours’

One credit hour equals 15 contact hours.

A 4 credit hour course means there are 4 contact hours of instruction each week.

Example: 4 hours per week x 15 weeks = 60 contact hours for a semester. (A semester is 15 weeks.)

The credit hours for clinical experience vary widely among programs. They are arbitrary but all students must have 2,000 clinical contact hours.
